

Custom-made at the Yellow Sea Bowling Center

Above: Staff Sgt. David Gutierrez, 35th Fighter Squadron maintenance scheduler and part-time pro-shop technician at the Yellow Sea Bowling Center, sizes the hand of Master Sgt. Lori Cates, 35th Fighter Squadron. Measuring the span of the hand is one of the most important parts of custom fitting a ball. Right and Below: Gutierrez drills holes to a custom fit. The thumb hole is drilled 2.75 inches deep and on a conventional ball the finger holes are drilled the same. On a fingertip ball, the holes are drilled 1.75 inches deep.

Photos by Airman 1st Class Brian Hill

Right: Gutierrez uses a wet sander to sand down the plugs made after drilling.
